### ACCRA CITY HOTEL'S ENVIRONMENTAL PROGRAM

At the Accra City Hotel, we are proud to be doing our part in the global movement against climate change. We're working hard to reduce our emissions through energy conservation and other measures.

Here are some green initiatives the Hotel has already implemented:

- Environmentally sensitive cleaning products
- Low-flow toilets, sinks and showers
- Work place waste reduction (double sided printing, recycled paper, etc.)
- Unused shampoo/condition and lotions, linen, computers, furniture donated to social services programs
- Sustainable landscaping
- Recycling of bottles, papers and plastics

You can also during your stay be an actor of our environmental approach:

#### **Energy**

The energy is not an unlimited resource. Think of switching off the lights and the television set when you leave your room as well as to close windows during the use of the air conditioning using cool.

#### **Water**

The water is a precious resource. Consume it with attention! If you stay several days in our Hotel, ask us not to replace daily your bath towels and your sheets to save some water, the washing powder and the electricity.

#### **Waste**

We suggest you participating in the selective sorting to put your paper packaging, your bottles in plastic and in glass on the desk of the room.

#### **Biodiversity**

When you go out respect the nature without disturbing it!
